

PYRILARV 0.5 SD offers excellent potential flying pests control with long residual activity in mosquito breeding sites, even in brackish water.

PYRILARV 0.5 SD is specifically suitable in the fight against

PYRILARV 0.5 SD

Ready to use granular larvicide

COMPOSITION
PYRIPROXYFEN 0.5%

PYRILARV 0.5 SD provides the greatest initial & residual activities against mosquito larvae in rock pools with brackish water and it inhibits adult emergence for more than 2 months at a concentration of 0.05mg/ltr or higher.

The active ingredient Pyriproxyfen is an insect growth regulator (juvenile hormone mimic) which acts similarly to insect growth hormones that occur naturally in insects and acts on the immature life stages of the target insect, preventing the adult from developing.

RECOMMENDED DOSE
0.05-0.1mg/ltr (A.I.)
